

SCHOOL OF AGRICULTURE

Bachelor of Science in Agriculture; Bachelor of Science in Food Science and Technology; Bachelor of Arts Honours in Rural Development; Master of Science in Agriculture; Master of Science in Food Science and Technology; Masters in Rural Development; Doctor of Philosophy in Rural Development; Doctor of Philosophy in Agriculture.

SCHOOL OF EDUCATION

Bachelor of Education in Foundation Phase; Bachelor of Education in Further Education and Training; Postgraduate Certificate in Education; Bachelor of Education Honours in Educational Management; Bachelor of Education Honours in Guidance and Counselling; Master of Education, Doctor of Education.

SCHOOL OF ENVIRONMENTAL SCIENCES

Bachelor of Environmental Sciences; Bachelor of Earth Sciences in Hydrology and Water Resources; Bachelor of Earth Sciences in Mining and Environmental Geology; Bachelor of Urban and Regional Planning; Bachelor of Environmental Sciences Honours; Master of Earth Sciences in Mining and Environmental Geology; Master of Environmental Sciences; Master of Earth Sciences in Hydrology and Water Resources; Master of Urban and Regional Planning; Doctor of Philosophy in Environmental Sciences (Ecology and Resource Management); Doctor of Philosophy in Environmental Sciences (Geology); Doctor of Philosophy in Environmental Sciences (Hydrology and Water Resources).

SCHOOL OF HEALTH SCIENCES

Diploma in Nursing Science; Diploma in Psychiatric Nursing; Bachelor of Nursing Science in Education, Management and Community; Bachelor of Nursing; Bachelor of Psychology; Bachelor of Science in Nutrition; Bachelor of Science in Biokinetics; Bachelor of Science in Recreation and Leisure Studies; Bachelor of Science in Sport and Exercise Science; Advanced Diploma in Sport Management; Postgraduate Diploma in Primary Health Care and District Health Management; Bachelor of Nursing Honours in Administration; Bachelor of Nursing Honours in Education; Master of Public Health; Master of Science in Public Nutrition; Master of Nursing; Doctor of Philosophy, Doctor of Philosophy in Public Health.

SCHOOL OF HUMAN AND SOCIAL SCIENCES

Higher Certificate in Music; Bachelor of Arts in Development Studies, Bachelor of Arts in International Relations; Bachelor of Arts in Media Studies; Bachelor of Arts in Language Practice; Bachelor of Arts, Youth in Development; Bachelor of Indigenous Knowledge Systems; Bachelor of Social Work; Bachelor of Arts Honours; Bachelor of Arts Honours in International Relations; Bachelor of Arts Honours in African Studies; Honours in Gender Studies; Master of Arts; Master of Arts in African Studies; Master in Gender Studies; Doctor of Philosophy; Doctor of Philosophy in African Studies; Doctor of Philosophy in Gender Studies.

SCHOOL OF LAW

Bachelor of Arts in Criminal Justice; Bachelor of Laws; Bachelor of Arts Honours in Criminal Justice, Master of Arts in Criminal Justice, Master of Laws.

SCHOOL OF MANAGEMENT SCIENCES

Bachelor of Administration in Public Administration; Bachelor of Commerce (Accounting); Bachelor of Commerce (Business Information Systems); Bachelor of Commerce (Business Management); Bachelor of Commerce (Cost and Management Accounting); Bachelor of Commerce (Economics); Bachelor of Commerce (Human Resource Management); Bachelor of Commerce (Tourism Management); Bachelor of Commerce in Accounting Sciences; Bachelor of Administration Honours; Bachelor of Commerce Honours; Master of Public Management; Master of Commerce; Doctor of Philosophy.

SCHOOL OF MATHEMATICAL AND NATURAL SCIENCES

Bachelor of Science; Bachelor of Science Honours; Master of Science, Doctor of Philosophy.

VISION

The University of Venda aspires to be at the centre of tertiary education for rural and regional development in Southern Africa

MISSION STATEMENT

The University of Venda, anchored on the pillars of excellence in teaching, learning, research and community engagement, produces, graduates imbued with knowledge, skills and qualifications which are locally relevant and globally competitive.

www.univen.ac.za

OFFICERS OF THE UNIVERSITY

Chancellor

Adv. Monjankunyane Gumbi

Law degrees from the South African Universities of the North (now University of Limpopo), and (Witwatersrand); Certificate in Trial Advocacy from the (University of Texas) in Austin.

Chairperson of the Council

Mr. M.J. Lekgetha

B. Com (Acc), Higher Diploma in Tax Law; Diploma in Corporate Finance CFA (S.A).

Vice-Chancellor and Principal

Dr. Bernard Nthambeleni, PhD (UJ).

Deputy Vice-Chancellor: Academic

Prof. J.E. Crafford, PhD (Pret).

Deputy Vice-Chancellor: Operations

Dr R.L. Martin, Dip Soc Work (UWC); DPLR (UNISA SBL); Adv. Lab Law (Unisa Tax & Bus Centre); PG Dip Soc Dev, Plan & Mangmt (Swansea, UK); B Admin (Unisa); MAP (WITS BS); MBA (BSN); PhD (UP).

Acting University Registrar

Adv. EN Lambani, BProc (Unizul), LLB (Univen), LLM (WITS), Adv. Dip in Company Law, Dip in Close Corporation (RAU).

President of Convocation

Vacant

Director: Student Affairs

Mr. L.G Tshikhudo, BA, BA Honours (Psychology) (University of Venda), Post Graduate Diploma in Marketing (UNISA), MBA (Renesys Business School).

Dean: School of Agriculture

Prof. J.J.O. Odhiambo, BSc (Agric) (Hon), MSc (Agric) (Nairobi), PhD (University of British Columbia, Canada).

Acting Dean: School of Education

Prof. T Runhare, Cert. in Personnel & Training Management (IPM Zimbabwe); C.E, B.ED, M.ED, (UZ); PhD (Pretoria).

Dean: School of Environmental Sciences

Prof. T R.O. Odiyo, BSc (Hons)(Egerton). MSc(Dar-es-Salaam) PhD (Wits).

Dean: School of Health Sciences

Prof. M.T. Mulaudzi, BA (Hons), UED, (Univen), BA (Hons) in HRD (RAU), Mphil (Stell), PhD (Univen), Postdoctoral MSc (Columbia University).

Dean: School of Human and Social Sciences

Prof. M.A. Makgopa, BA (Hons) (Unisa) MA (STELL), D Litt et Phil (Unisa) JSTC (Setotolwane).

Dean: School of Law

Prof. L. Ndlovu, Diploma in Secondary Education (UZ), LLB, LLM (Fort Hare), LLD (UNISA), Advocate of the High Court of South Africa.

Dean: School of Management Sciences

Prof. A. Kadyamatimba, MSc (Electronic Eng: Lvov-USSR), PhD (Comp Sci: Lancaster, UK), MZCS (Zim), MBCS, MIEE, & Chartered Eng (UK).

Dean: School of Mathematical and Natural Sciences

Prof. N. Potgieter, BSc (Biological Sciences) RAU, BSc Hons (Medical Virology) University of Pretoria, MSc (Medical Virology) University of Pretoria, PhD (Medical Virology) University of Pretoria.

PROGRAMME

Director of Ceremony	:	Dr. Takalani Dzaga – APR Director: Communications and Marketing
Date	:	Friday, 18 September 2020
Time	:	09h00
Song	:	Gaudeamus Igitur
Constitution of the Congregation:	:	Adv. Monjankunyane Gumbi Chancellor
Welcome Address	:	Dr. Bernard Nthambeleni Vice-Chancellor & Principal
Presentation of Graduandi and Awards	:	Prof. Jan Ernst Crafford DVC Academic
Congratulatory Message	:	Adv. Monjankunyane Gumbi Chancellor
Singing of the National Anthem	:	Univen Choir
Dissolution of Congregation	:	Adv. Monjankunyane Gumbi Chancellor
Song	:	Gaudeamus Igitur

GAUDEAMUS IGITUR

Let us live then, and be glad
While young life's before us!
After youthful pastime, had,
After old age, hard and sad,
Earth will slumbe o'er us,

Brief is life, and brevity
Briefly shall be ended:
Death comes like whirlwind strong
Bears us with his blast long;
None shall be defended.

Live this University
Men that learning nourish!
Live each member of the same
Long live all that bear its name.
Let them ever flourish!

GAUDEAMUS IGITUR

Gaudeamus igitur, juvenes dum sumus (Rep)
Post jucundam juventutem, post molestam senectutem,
Nos habebit humus, nos habebit humus.

Vita nostra brevis est, brevi finietur (Rep)
Venit mors velociter, rapit nos atrociter,
Nemini parcetur, nemini parcetur.

Vita Academia, Vitat Professores, (Rep)
Vitat mebrum quodlibet, vivant membra wuaelibet,
Semper sint in flore, semper sint in

NATIONAL ANTHEM

Nkosi sikelel' iAfrika
Maluphakanyisw' uphondo lwayo,
Yizwa imithandazo yethu,
Nkosi sikelela, thina lusapho lwayo.
Morena boloka setjhaba sa heso,
O fedise dintwa le matshwenyeho,
O se boloke, O se boloke setjhaba sa heso,
Setjhaba sa South Afrika – South Afrika.

Uit die blou van onse hemel,
Uit die diepte van ons see,
Oor ons ewige gebergtes,
Waar die kranse antwoord gee,

Sounds the call to come together,
And united we shall stand,
Let us live and strive for freedom,
In South Africa, our land.

SEPTEMBER 2020 VITUAL GRADUATION LIST

SCHOOL OF AGRICULTURE

BACHELOR OF SCIENCE IN AGRICULTURE

DIKGALE	THABANG
HASANE	NKHAPHO

MASTERS IN RURAL DEVELOPMENT

MACHETE

MOHALE

Title : Contribution of Subsistence Farming to Household Food Systems: A Case of Mamokgadi Village, Mopani District of Limpopo Province

Supervisor : Dr J. Zuwarimwe

Co-Supervisor : Dr M. Manjoro

MUDZIELWANA

TSHILIDZI NORAH

Title : Factors Influencing Non-participation of Youth in Indigenous Games in Thulamela Municipality of Vhembe District

Supervisor : T. Tshitangano

Co-Supervisor : Dr M. Manjoro

MASTER OF SCIENCE IN AGRICULTURE

KGOBE

NNANA MAGDELINE

Title : The effect of summer and winter crop rotations on selected soil properties and crop productivity

Supervisor : Prof JBO Ogola

Co-supervisor : Dr AO Odindo

LENYANYABEDI

KHUTSO

Title : Spatial variability of soil fertility indicators in selected soils in South Africa

Supervisor : Prof IIC Wakindiki

Co-supervisor : Dr A Nciizah

LETSOALO

MORAKENE LAMBERT

Title : The effect of biochar on immobilization and phytoavailability of chromium, nickel and lead in soils amended with slag

Supervisor : Prof JJO Odhiambo

Co-supervisor : Prof P Lukhele-Olorunjus

MABASA

HLAYISANI ZACHARIA

Title : Spatial variability of aggregate stability, size distribution and their implication on erosion and runoff in selected soils in South Africa

Supervisor : Prof IIC Wakindiki

Co-supervisor : Dr A Nciizah

MADZIVHANDILA **VHULENDA**
Title : The effects of phosphorus fertilizer and bradyrhizobium inoculation on dry matter and nutrients accumulation in chickpea (*Cicer aritienum* L.)

Supervisor : Prof JBO Ogola
Co-supervisor : Dr ST Maseko

MAGAGULA **SIYABONGA ISAAC**
Title : Tillage, soil texture and mineralogy effects on respiration in some South African soils

Supervisor : Prof IIC Wakindiki
Co-supervisor : Prof JJO Odhiambo

MAHLO **LEWELE ALFRED**
Title : The effect of biochar and NPK fertilizer on selected soil chemical properties and maize (*Zea mays* L.) growth, nutrient uptake and yield

Supervisor : Prof JJO Odhiambo
Co-supervisor : Dr J Mzezewa

MALELE **KGETISE PETROS**
Title : Genotypic variation in water use efficiency, gaseous exchange and yield of four cassava (*Manihot esculenta* Crantz) landraces

Supervisor : Prof JBO Ogola
Co-supervisor : Prof ET Gwata

MASELESELE **DEMBE**
Topic : Effects of macadamia husk compost on physicochemical soil properties, growth and yield of Chinese Cabbage (*Brassica rapa* L. *Chinensis*) on sandy loam soil

Supervisor : Prof JBO Ogola
Co-supervisor : Dr R Murovhi

MUFANDILANI **MVUSULUSO**
Title : Soil compaction and texture effects on yield, vegetative growth parameters and quality of potato tubers (*Solanum tuberosum* L.) in selected sites in Limpopo province

Supervisor : Prof IIC Wakindiki
Co-supervisor : Prof ET Gwata

MUKOSI	RENDANI
Topic	: Chemical composition, rumen degradability and post ruminal digestibility of selected soya bean (<i>Glycine max</i>) cultivars harvested at different growth stages
Supervisor	: Prof J.J. Baloyi
Co-supervisor	: Dr F. Fushai
MUTHABI	ANZA
Topic	: The response of symbiotic performance, growth and yield of chickpea (<i>Cicer arietinum</i> L.) genotypes to phosphorus fertilizer rates and rhizobial inoculation
Supervisor	: Prof JBO Ogola
Co-supervisor	: Dr ST Maseko
RAKAU	MAMOKGANYA VALENTIA
Topic	: Nutritive value of mixed <i>Pennisetum purpureum</i> (Napier grass)- <i>Leucaena leucocephala</i> silage for growing sheep
Supervisor	: Prof J.J. Baloyi
Co-supervisor	: Dr F. Fushai
RAMATHITHI	TSHILIDZI
Topic	: Effect of <i>Moringa oleifera</i> and Probiotic inclusion on growth performance, carcass characteristics and cost benefit analysis in broiler chickens
Supervisor	: Dr. E. Bhebhe
Co-supervisor	: Prof J.J. Baloyi
RAPHOLO	SEROTO EDITH
Title	: Modelling the effects of maize/lablab intercropping on soil water content and nitrogen dynamics using APSIM Model.
Supervisor	: Prof JJO Odhiambo
Co-supervisor	: Dr Munir Hoffmann
RAVELE	NDAMULELO
Title	: On-site effects of accelerated erosion on direct physical soil quality indicators
Supervisor	: Prof IIC Wakindiki
Co-supervisor	: Prof JJO Odhiambo
SHILENGE	SIPHIWE KIM
Topic	: Evaluation of chickpea (<i>Cicer arietinum</i> L.) genotypes in contrasting agro- ecological regions of Limpopo and Mpumalanga provinces
Supervisor	: Prof JBO Ogola
Co-supervisor	: Dr AO Odindo

DOCTOR OF PHILOSOPHY IN RURAL DEVELOPMENT

IWARA ISHMAEL OBAEKO

Topic : Towards a Model for Successful Enterprises Centred on Entrepreneurs' Exogenous and Endogenous Attributes: Case of Vhembe District, South Africa

Promoter : Dr B. M. Kilonzo

Co-Promoter : Dr J. Zuwarimwe

Citation

High failure rates of enterprises is a major characteristic of more than half of the world's economies, especially in Africa. In South Africa, average enterprise failure rate is estimated to be 70 %. This is so despite sustained government investments that are meant to support enterprise growth. It has been argued that the country does not have sustainable entrepreneurship models to reinforce this. Studies were conducted in the four Local Municipalities of Vhembe District and uncovered the key internal and external factors of successful enterprises that anchor the local entrepreneurship model.

MALIMA TUWANI PETRUS

Topic : Intervention Strategy for Effective Potable Water Supply System to Rural Communities in Vhembe District Municipality, South Africa

Promoter : Dr B Kilonzo

Co-Promoter : Dr J Zuwarimwe

Citation

Potable water supply is a fundamental human right, which is protected by international conventions and national laws. Access and existence of an appropriate water supply system are central to ensuring that grassroots communities enjoy healthy and productive livelihoods. However, supply of potable water in rural areas of sub-Saharan Africa, including South Africa, remains a major challenge. The intervention strategy for enhancing the effectiveness of potable water supply in rural areas that is proposed here is a product of a case study of the realities of the four Local Municipalities in Vhembe District of South Africa.

MATHAULULA MUSHAISANO AGNES

Title : Pillars of a Safety Management System for Small-scale Vended Foods in a Rural Area-based Municipality of South Africa

Promoter : Prof J. Francis

Co-Promote : Dr M. Manjoro
Prof A.I.O. Jideani

Citation

Throughout the world, small-scale food vending is a poverty buffering and income generation strategy that helps optimize the livelihoods of the households practicing it. However, indifferent handling practices and substandard hygiene compromise the safety of the foods sold. Thus, knowledge and attitudes of small-scale food vendors operating in the Sibasa and Thohoyandou areas of Thulamela Local Municipality, and their handling practices were examined. Complementary studies were conducted

focusing on microbial composition and concentration in foods sampled from the most distinct vending sites. Attitudes and behaviour, hygiene practices, management of operational environment, infrastructure development, law enforcement and need-based training are recommended as the intertwined pillars of a safety management system for small-scale vended foods.

MUCHAKU

SHADRECK

Topic : A Sustainable Framework for Resolving Conflicts Involving Traditional Leaders and Ward Committees in a Local Municipality of South Africa

Promoter : Prof J. Francis

Co-Promoter : Dr M.M. Tshitangoni

Citation

Multi-faceted conflicts in rural areas of South Africa reflect the strained relationships existing between Traditional Leaders and Ward Committees and retard the pace of local development. In the current study, it was concluded that if traditional courts create a more enabling environment for a broad range of stakeholders to participate, intra-community harmony would be realised in Local Municipalities. Based on this argument, a context-based conflict resolution framework was co-constructed with youth and adults occupying elected and traditional leadership positions in Greater Giyani Local Municipality of Limpopo Province.

NETSHILINGANEDZA

TENDANI ROBERT

Title : Factors Influencing the Attitudes of Final Year Undergraduate Students Towards Entrepreneurship as A Career Option: A Case-Study of the University of Venda in Limpopo Province of South Africa

Promoter : Dr M.J. Mudau

Co-Promoter : Prof J. Francis

Citation

The ever increasing unemployment rate confronting university graduates in South Africa is partly attributed to reduced investments in the economy and graduates having sets of skills that do not match the ever changing job market. This highlights the need for universities to produce graduates with entrepreneurial skills, mainly because of their potential to create jobs for themselves and others. In the PhD studies carried out at the University of Venda, awareness and knowledge of entrepreneurship, personality traits, and socio-cultural and environmental factors were found to be influencing the attitudes of final year undergraduate students towards choosing entrepreneurship as a career option. Thus, these factors should be taken seriously when integrating entrepreneurship into the curricula of all disciplines.

DOCTOR OF PHILOSOPHY IN AGRICULTURE

ONIPE OLUWATOYIN OLADAYO

Title : Oil distribution, microstructure and in vitro starch digestibility of bran enriched magwinya

Promoter : Professor A. I. O. Jideani

Co-Promoter : Dr. D. Beswa

Citation

Magwinya, a cereal fried dough, is a popular traditional snack widely consumed across various ethnic groups in sub-Saharan Africa, but little is known about its production, consumption, oil distribution, microstructure, and starch digestion in a scholarly context. Indigenous knowledge on magwinya production in Thohoyandou was documented in survey data. Two types of magwinya enriched with varying concentrations of wheat and oat bran were the focus of the doctoral research of Ms. Onipe. Bran-enriched magwinya were produced and analysed for moisture loss, oil fractions, crust and crumb microstructural properties, glucose contents, and glycemic index (GI). Oil uptake was established as a surface-related phenomenon, and the distribution of the oil fractions varied from one magwinya type to the other. The reduction of magwinya GI from high to medium was actualised with bran enrichment. Two non-invasive technologies (Confocal microscopy and Hyperspectral imaging) were used for qualitative and quantitative analysis of magwinya. Confocal microscopy revealed notable differences in oil distribution, depth of oil penetration, structure, and pore properties of the fried products, thus emphasising the impact of ingredient formulation (water and bran variation) on oil uptake reduction in magwinya. This study provides scientific evidence for consumers, researchers, and food processors, on the benefits of bran enrichment in magwinya and further diversification on the application of non-invasive technologies for food analysis, thus contributing to food nutrition and security in South Africa. Part of the findings has been published in three international peer-reviewed DHET approved journals, two of which are in the journal Foods with an impact factor of 4.092.

Title : Effect of Computer Simulation-Based Instruction in Chemistry on the Academic Achievement of Grade 12 Learners

Promoter : Dr M Mpeta

Co-promoter : Dr SJM Kaheru

Citation

Chemical Reaction Rate (CRR) is one of the topics which Grade 12 Physical Sciences learners find challenging. The purpose of this study was to examine the effect that the use of Computer Simulation-Based Instruction (CSBI) in teaching CRR in Chemistry, as one of the alternative strategies to traditional teaching, would have on the academic achievement of Grade 12 learners in this topic. The study employed a mixed method approach. The sample consisted of one hundred and eighteen Grade 12 Physical Sciences learners in two classes, from two secondary schools located in Mopani District. The experimental group was taught CRR using CSBI and the control group using the traditional teaching approach. Data were collected using pre-test and post-test in the quantitative phase of the study. Test on Chemical Reaction Rate Concepts (TCRRC) and Attitudes Towards Chemistry Lessons Scale (ATCLS) were the research instruments used. The qualitative data were collected using semi-structured interviews. The quantitative data were analysed through the independent t-test. There was a statistically significant difference in the scores of the experimental group and the control group in the post-test with a moderate effect size in favour of the experimental group. The findings were that CSBI is a more effective teaching approach than traditional method and it improved the learners' conceptual understanding of CRR. The findings are expected to inform Chemistry educators, subject advisors and curriculum developers on strategies that can improve the academic achievement of learners, in CRR, in Chemistry.

Title : Strengthening English Second Language Competence of Foundation Phase Teachers in Vhembe District, South Africa

Promoter : Prof MP Mulaudzi

Co-Promoter : Dr SK Muthambi

Citation

This study sought to investigate strategies to strengthen the English Second Language competence of Foundation Phase teachers in selected primary schools in Vhembe District, Limpopo Province. The study adopted an exploratory qualitative approach with the use of phenomenological research design. The population for this study encompassed all Foundation Phase teachers, all Foundation Phase Heads of Departments (HoDs) and all primary school principals in the Vhembe District. A purposive sampling technique was used to select participants for the study. The sample comprised 15 Foundation Phase teachers, 5 heads of departments and 5 primary school principals from 5 different schools. The study found out that most teachers tried to maintain the consistent use of English during teaching. However, to some, it was difficult to consistently use the English language, as a result, teachers switched to their Home Language to explain difficult vocabulary to learners and ultimately ended up teaching using the Home Language instead of the English Language. The study recommends that teachers should engage themselves in

continuous professional teachers' development trainings and use various strategies that promote consistent and effective use of the English Language.

RATSHIVHADELO **THIVHILAEI ALEX**
Title : Enhancement of Grade 12 Learners' Performance in Physical Sciences in Mopani District, Limpopo Province

Promoter : MP Mulaudzi
Co-Promoter : SK Muthambi

Citation

The purpose of the study was to enhance Grade 12 learners' performance in Physical Sciences in Mopani District, in the Limpopo Province. The study adopted a mixed methods research. The population of the study comprised of Grade 12 Physical Sciences learners and teachers. 10 schools from 10 circuits in the Mopani Education District were randomly sampled. The major findings of this study were that there are some modern, efficient and effective strategies that were not implemented in the system to enhance Physical Sciences learners' performance in Mopani district. These strategies included efficient use of learning textbooks, laboratory experiments, ICT gadgets, educational fieldtrips, appropriate teaching approaches and the best learners learning styles. The study recommends that the Department of Education should provide adequate textbooks, well-equipped laboratories, and ICT gadgets to all high schools' secondary schools in the district. Teachers should also improve their use effective teaching approaches which include hands on or student-centred learning, inquiry- based learning, projects based and cooperative learning.

Co-promoter : Dr NF Litshani

Citation

Herbert Zigara's thesis explored the nature of boys' and girls' access to and their performance in science and technology subjects at one mixed sex and one single sex school in Zimbabwe. The research was anchored on the mixed methods research design. The study's quantitative objective was to establish if there was any significant difference in access to and performance in science and technology subjects between girls in a single sex school and their counterparts in a mixed sex school. The main objective that generated qualitative data sought to explore factors that could influence access to and performance of boys and girls in science and technology subjects at single sex and mixed sex schools. The case study comprised of two research sites; a mixed sex and a single sex school in Zimbabwe. Quantitative findings revealed that there was significant difference ($p < 0.05$) in terms of access to subjects at school which favoured single sex school girls compared to mixed sex school girls. Qualitative findings revealed that socialising agents namely, the media, home, school and peers promote a patriarchal ideology which favours boys than girls and help to track more boys than girls into science and technology subjects. The study recommended family dialogues on gender roles, gender sensitive seminars in communities, government

advocacy programmes, gender sensitive textbooks in communities and schools, gender sensitive modules to student teachers, deployment of gender experts in schools and crafting of policies to make the teaching of science and technology subjects mandatory.

OYEBANJO OMOSALEWA OMOLARA
Title : Mineralogy and Geochemistry of Kaolins in Oxidic Soils developed from different Parent Rocks in Limpopo Province, South Africa Promoter:

Promoter : Senior Professor G.I. E. Ekosse
Co-Promoter : Professor J. O. Odiyo

Mrs Oyebanjo's research assessed the characteristics of selected soil kaolins in Limpopo Province, South Africa and their possible effects on soil fertility. This research involved the evaluation of mineralogical and geochemical characteristics of oxidic soils and soil kaolins developed from four selected parent rocks (basalt, granite, arkosic sandstone, and gneiss). The physico-chemical and phosphorus (P) adsorption characteristics of the soils and soil kaolins were also determined. Her findings showed that the principal factors responsible for the mineralogical and geochemical characteristics of the soils were the parent rocks and degree of weathering. The kaolinites in the soils were formed through the leaching and desilication of the primary mafic and felsic minerals under suboxic conditions. The appreciable amounts of trace elements in the soil kaolins suggest the likely role for kaolins to serve as host for minor elements as structural ions. This has significant implications on soil fertility. The H-type P adsorption isotherms obtained for both the soils and soil kaolins indicated their high affinity for phosphorus by chemisorption. In addition, significant correlation between the P adsorption Langmuir model parameters for the soils and soil kaolins indicated that the soil kaolins could be taken as a good predictor for P sorption dynamics in the soils. The soil fertility was highest in soils developed from arkosic sandstone, followed by granite, gneiss, basalt, and quartzite, respectively. The P sorption dynamics of the soils were closely related to cation exchange capacity, pH, organic matter, sand and clay contents, and Fe₂O₃. However, Fe₂O₃ is the most important parameter in predicting the P sorption dynamics in the soils. Kaolinite content appears to be one of the most important indicators of soil quality. Moreover, models to advance the interplay between the various soil properties and P sorption parameters in the soils were developed. This study has contributed towards better

understanding of the influence of provenance and degree of weathering on soil kaolin characteristics in relation to soil fertility. The P sorption dynamics in soils and management options have been better established. This could be applied in soils developed from similar parent rocks for the benefit of policy makers and the society at large. Four articles were written from the result of this study with one already published in DHET accredited journal and three are currently under peer review.

DOCTOR OF PHILOSOPHY IN ENVIRONMENTAL SCIENCES (GEOLOGY)

MHLONGO

SPHIWE EMMANUEL

Title : Development of computer-based advisory system for selection of appropriate rehabilitation strategies for designated abandoned mine sites in Limpopo province of South Africa

Promoter : Dr. F. Amponsah-Dacosta

Co-Promoter : Prof. A. Kadyamatimba

Citation

South Africa has many abandoned mines which seriously affect the environment and the livelihood of the host communities. The lack of in-depth knowledge of the problems of these mines, limited resources for their rehabilitation, lack of clearly assigned responsibilities for rehabilitation, and the absence of criteria and standards of rehabilitation have led to use of inappropriate strategies to rehabilitate abandoned mine sites. The aim of Mr. Mhlongo's thesis was to develop a computer-based advisory system for selecting suitable rehabilitation strategies for designated abandoned mine sites in the Limpopo Province of South Africa. Mr. Mhlongo adopted research methodology which involved characterization of selected abandoned mine sites and devising methods for prioritization of features such as tailings dumps and mine entries of these sites for rehabilitation. Semi-quantitative (SWOT analysis and Quantitative Strategic Planning Matrix) and Multi-Criteria Decision-Making (AHP and Pugh Matrix) tools were also used to evaluate the suitability of different strategies for dealing with the problems of the abandoned mines. He used ES Builder Shell (Version 3.0, McGoo Software) to create web-based expert systems for rehabilitation of abandoned mine sites. In addition, he developed a framework for estimation of costs of rehabilitation of abandoned mines by taking into consideration direct costs and other key cost estimates that are normally disregarded. Mr. Mhlongo's thesis has provided an in-depth knowledge and profound understanding of the environmental and physical hazards as well as the socio-economic issues of abandoned mine sites. It has created a catalogue of appropriate rehabilitation strategies for dealing with different problems of abandoned mines and developed new and innovative methods for ranking the mine entries and tailings dumps of abandoned mines for rehabilitation. Three rule-based expert systems that provide guidance on different aspects of rehabilitation of abandoned mines were created. These were expert systems for ranking of problems of abandoned mine entries, ranking of abandoned tailings dumps for rehabilitation, and selection of strategies for rehabilitation of abandoned mines. In addition, he developed a framework for estimation of costs of rehabilitation of abandoned mines. Mr. Mhlongo has published five articles in DHET accredited journals and three papers in prestigious peer reviewed conference proceedings based on his thesis. He presented aspects of his thesis at international and national conferences, and in one of the national conferences, Mr. Mhlongo won the Best Presenter Award.

DOCTOR OF PHILOSOPHY IN ENVIRONMENTAL SCIENCES (HYDROLOGY AND WATER RESOURCES)

MATHIVHA

FHUMULANI INNOCENTIA

Title

: Drought in Luvuvhu River Catchment: Assessment, Characterization and Prediction

Promoter

: Prof. H. Chikoore (North-West University)

Co-Promoters

: Dr. C. Sigauke
Prof. J. O. Odiyo

Citation

Fhumulani Mathivha thesis focuses on drought assessment, characterisation, and prediction in Luvuvhu River Catchment, northeast of South Africa. Although drought often develops and affects a much larger scale than a catchment, studies that aim to improve drought-induced water scarcity at this scale are important. Drought indices were used to identify and quantify its intensity and were formulated at 1-, 6- and 12-month timescales. The indices' inputs varied from streamflow, rainfall, reservoir storage, temperature, and evaporation. For predicting drought, statistical (Generalised Additive Models - GAMs) and machine learning models (Long-Short Term Memory – LSTM) were applied and ensembled with Empirical Mode Decomposition (EEMD) and Autoregressive Integrated Moving Average (ARIMA) models. On assessment and characterization, the study found that drought trends increased over the study period which indicated an increased drought frequency. Most of the drought events reported over the catchment were classified as mild to moderate. The relationship between drought severity and duration revealed a strong linear relationship, which meant that the longer a drought event lasted the more severe were the impacts on catchment water resources. LSTM outperformed GAM based models in predicting drought in the Luvuvhu River Catchment, indicating the strength of those models in predicting drought events in semi-arid environments. Hybrid machine learning models adopted in this study can be used for operational drought forecasting and be incorporated into existing seasonal climate forecasting and early warning systems used by South Africa Weather Service. This contributes to proactive drought risk assessment and improved management of water resources by the Department of Water and Sanitation. The PhD thesis has the potential to generate three manuscripts, of which one has been published, one is under review and another is in preparation.

DOCTOR OF PHILOSOPHY IN GEOGRAPHY

CHINEKA

JESTINA

Title : Conservation Agriculture as an Adaptation Strategy to Drought in Chivi District, Zimbabwe

Promoter : Prof. H. Chikoore

Co-promoter : Dr. N. S. Nethengwe

Citation

Drought is a perennial problem which is exacerbated by climate change in Chivi District, a semi-arid region in the south of Zimbabwe. Ms Chineka's PhD thesis evaluated a Conservation Agriculture project which was introduced to the district in 2008 to combat drought impacts on food production and rural livelihoods. It was found that the project was implemented based mainly on three principles of zero tillage, mulching and crop rotation which were aimed at protecting soil moisture and structure, and improving crop yields. The VLIR-UOUS (2019) Theory of Change (ToC) principles structured interview checklist was used to review the logical framework of conservation agriculture to establish the project design. Questionnaires, key informant interviews and focus group discussions were used to characterise the nature of conservation agriculture in Chivi and to assess the socio-economic impact of the project. Official records were analyzed to compare food crop production yields per hectare under both conventional and conservation agriculture. Atlas.ti 8's capabilities such as Co oc for frequency of occurrence, Co-code Doc Table for numeric analysis, Networks and report tools for visual and text analysis were employed in data analysis. The key findings highlighted weaknesses in conservation agriculture principles and project design in Chivi District. The study found low adoption of the project in the district, with some farmers withdrawing from the project against a downward trend in food production. This is despite conservation agriculture having higher yields per hectare than conventional agriculture. The study also found low socio-economic impact of conservation agriculture as a project and its potential outside the project framework. The study concludes that conservation agriculture can help alleviate the drought effects if the project's framework is adjusted to suit local context. In order to enhance adoption of conservation agriculture and new technologies in Chivi District and similar environments, the study developed a conceptual framework based on empirical evidence and proposed several domains of change. A major contribution of this work to climate science is in evaluation of the design, implementation and performance of climate change adaptation initiatives in semi-arid environments, towards decision making and natural disaster risk reduction. This PhD has the potential to produce two manuscripts and a book chapter, of which one article has already been published.

Title : Integrating Indigenous and Modern Scientific Knowledge in Community-Based Early Warning System Development for Climate Related Malaria Risk Reduction in Mopani District of South Africa

Promoter : Dr. N.S Nethengwe

Co-promoter : Prof. H. Chikoore

Citation

This study sought to integrate indigenous and scientific knowledge in community-based early warning system development for malaria risk reduction in Mopani District. It was underpinned by the constructivist grounded theory and the pragmatism epistemologies. The results of the study reveal that people in Mopani District can predict malaria season onset by forecasting rainfall using various indigenous knowledge-based indicators such as plant phenology, migratory bird types, celestial bodies and migratory insects. The indigenous knowledge-based indicators grounded in data sets that were collected in the study area were validated based on fieldwork and meteorological data. The thesis made a significant contribution by developing an early warning system to predict the oncoming Malaria season. The predictive capacity has been enhanced by integrating indigenous knowledge-based indicators with scientific data using Information and Communication Technology (ICT) as a platform for integration in the design of the system. Hence, the Malaria Early Warning System App was developed using Apache Cordova, JDK 1.8, Node JS, and XAMPP software. The App was validated using the elements of an effective early warning (such as risk knowledge, response capacity and monitoring and warning services) as well as risk threshold used by the South African Weather Service. Though the App was validated at the micro-scale, the utility value and its effectiveness as a platform for Early Malaria Warning can be fully realized by institutions like South Africa Weather Services and Malaria Institute, which may have the capability to further develop the App. The thesis has the potential of generating three publications. One manuscript is ready for submission to the Jamba Journal. One is in preparation and the final one will be on the validation of the developed App at scale.

Title : Assessing the Impacts of Climate Change and Adaptation Strategies on Smallholder Farming in the Vhembe District, South Africa.

Promoter : Dr. N. S. Nethengwe

Co-promoters : Prof. S. Mpandeli
Prof. H. Chikoore

Citation

Mr. Zongho Kom's thesis assessed the impacts of climate change and adaptation strategies on smallholder farming in the Vhembe District, South Africa. In most parts of South Africa, empirical evidence indicated the level to which climate change has impacted negatively on agricultural production in terms of increased temperature, prolonged drought and decreasing rainfall trends, all of which, have affected local farmers' livelihood and crop yield. In the Vhembe District, smallholder farming predominates and its vulnerability to climate change has increased over the past decades. Farmers' perceptions about climate change were validated by an analysis of

climatic trends from 1980-2015. Thematic analysis of qualitative data and the Multi Nominal Logit (MNL) regression model were used based on socio-economic and biophysical attributes as farmers' determinants of their adaptation choice to climate change. The findings revealed that, farmers' perceptions tallied well with meteorological trends in the study sites. Most of the smallholder farmers were aware of climate change and its negative impacts over the past three decades. Addressing key knowledge gaps in the study area, Zongho adopted a comprehensive and simplified MNL conceptual framework that can be used as a yardstick for future estimate of farmers' choice of adaptation strategies to climate change. He further, adopted a Sustainable Livelihood Framework that can be used as a tool for reducing smallholder farmers' vulnerability against climatic shocks. A multi-dimensional discourse of climate change is useful for policy makers and experts in terms of providing a comprehensive understanding of adaptation strategies against impacts of climate stressors on crop yield in the Vhembe District. The study could be adapted successfully in environments with similar socio-cultural fabric and agro-ecology for the benefit of the smallholder farmers' society at large. This thesis has the potential to generate 5 research articles, 2 of which have already been published in DHET accredited journals, 2 are in press and 1 manuscript is ready for submission.

Title : Strategies to facilitate the provision of quality healthcare services in public healthcare facilities in Limpopo Province South Africa

Promoter : Prof ML Netshikweta

Co-Promoter : Prof LB Khoza

Citation

Quality healthcare should be effective, efficient, accessible, acceptable and equitable. However, the health services in South Africa prior to 1994 were provided unequally along racial lines. The government of South Africa therefore, realized the importance of putting up the strategies to improve quality of healthcare service provision within the country. The constitution of South Africa, 1996, ss 27, gave the mandate that improving quality of healthcare service provision was the ultimate goal for the public service transformation programme. The purpose of the study was to develop the strategies to facilitate provision of quality healthcare services in public healthcare facilities in Limpopo province, South Africa. The study was conducted in the selected healthcare facilities of Limpopo province.

Findings of the study revealed budget constraints, staff shortages, infrastructural problems shortage of clinical equipment and inadequate maintenance of both equipment and infrastructure. Therefore, strategies to facilitate the provision of quality healthcare services in public healthcare facilities were developed. The study recommended the adoption of the straggles developed in order to facilitate improvement process of service provision in all public health facilities by Department of Health, to reduce. As a result of the novelty of this work, three peer reviewed articles have been submitted for possible published in DHET accredited journals.

NETSHISWINZHE

DORIS MATODZI

Title : A Model to Prevent Substance Use/Abuse by Student Nurses at the Limpopo College of Nursing, Limpopo Province, South Africa.

Promoter : Prof R.T. Lebese

Co-promoters : Prof D.U. Ramathuba

: Dr L. Makhado

Citation

Substance use/abuse is a persistent public health problem in tertiary institutions around South Africa. Alcohol and illegal drugs are the most commonly used substances by youths in tertiary institutions, including student nurses at the Limpopo College of Nursing (LCN). This was evidenced by poor academic performance, absenteeism, violence acts, damage to property and many more. The study aimed at developing a model to prevent substance use/abuse by student nurses at the LCN. This was a three-phased study. Phase one incorporated convergent parallel mixed-method with two stages, viz qualitative phenomenological research approach and quantitative descriptive-correlational design. The setting was all campuses in of LCN. The study population included lecturers, student affairs officers and student nurses. The sample was purposefully selected for qualitative and a stratified random sampling

technique was used for the quantitative study. Focus group discussions, unstructured in-depth interviews and questionnaires we used to collect data. Tesch's open-coding steps and Statistical data analysis were conducted the qualitative and quantitative studies respectfully. Phase 2: concept analysis and model development, and phase 3: model validation. The converged results showed that substance use/abuse is more prevalent among students of the age group of between 21 and 24 years that represented the majority in LCN. Substance use/abuse among student nurses was widespread. Various factors, including behavioural, environmental and student earning a stipend, have contributed to the problem. The concept "prevention" was analyzed, clarified and operationalized. The results of both the empirical study and concept analysis underpinned model development. The developed model was validated using a close-ended checklist, analyzed using simple descriptive statistics. The study recommended measures for preventing substance use which includes among others, engagement in recreational activities, availing crisis hotlines, transcendental meditation and repeated interventions such as booster programs to reinforce the original prevention goals. This model is already in use LCN Thohoyandou Campus.

TAKALANI

MORONGWA CAROLINE

Title

: The comorbidity of internalizing disorders and attention deficit hyperactivity disorder in primary schools in Lepelle-Nkumpi Municipality, Limpopo Province

Promoter

: Prof MT Mashamba

Co-promoter

: Prof T Sodi

Citation

The aim of the study was to explore the comorbidity of internalising disorders and ADHD symptoms. The study investigated whether children with ADHD have more symptoms of anxiety and depression than children without ADHD. The study went further to investigate whether children with ADHD have low self-esteem than children without ADHD. Also that internalizing comorbidities (anxiety and depression) are more prevalent in girls than in boys who have more externalising comorbidities which are oppositional defiant disorders (ODD) and conduct disorders (CD) and anger issues. The results were analysed using the analysis of variance (ANOVA) and post hoc benferoni analysis to determine the significant difference within ADHD subtypes. Results of the study showed that children with ADHD had comorbid internalizing disorders (anxiety and depression) when compared to their neurotypical group. Both boys and girls with a clinical diagnosis of ADHD showed symptoms of anxiety and depression. More symptoms of anxiety and depression were observed within the ADHD-HI, ADHD-PI and ADHD-C subtypes. Comorbid internalising disorders (anxiety and depression) were also associated with impairments with ADHD symptom, in particular inattention. the findings suggest that the comorbidity of internalizing disorders in a clinically diagnosed child with ADHD worsens or complicates the child's expected normal functioning unlike when the child was presenting with only ADHD. The results further suggest that a child with clinical diagnosis has double impairment as a result of many impairments which are occurring at the same time. Moreover, the existence of externalizing comorbidities which are salient in girls with ADHD may require proper screening and assessment.

DOCTOR OF PHILOSOPHY IN PUBLIC HEALTH

MUDAU AZWINNDINI GLADYS

Title : An Intervention programme to promote exclusive Breastfeeding Strategies in Limpopo Province.

Promoter : Dr JT Mabunda

Co-promoter : Dr LF Mushaphi

Citation

Breastmilk is fundamental for maximum growth and development of a child, because of its benefits, WHO/UNICEF recommended exclusive breastfeeding for six months. Despite recommendation and strategies that are in place the rate of breastfeeding, especially exclusive breastfeeding in South Africa is very low. The rate of infant mortality is also unacceptably high. Ms Mudau saw the need to improve child health and therefore also reduce infant mortality. Her work was inspired by her passion for health and wellbeing of children under the age of five years.

Ms Mudau worked with all stakeholders involved: District health managers, dieticians, nutritionists and professional nurses in two districts; Vhembe and Waterberg. Her research explored challenges experienced by the health care workers in the implementation of exclusive breastfeeding as well as determining enabling, reinforcing and predisposing factors that influence exclusive breastfeeding among lactating mothers. Ms Mudau developed evidence-based intervention programme to address and promote exclusive breastfeeding strategies in Limpopo Province. The intervention comprised of series of health talks and information leaflets. Ms Mudau's work presents an original contribution to the body of knowledge in health promotion amongst health care workers, communities/families and lactating mothers.

MULAUDZI SHUMANI PRECIOUS

Title : Strategies to facilitate the implementation of existing Life Orientation curriculum in secondary schools in Limpopo province.

Promoter : Dr Ramakuela NJ

Co- promoter : Dr Tshitangano TG

Citation

In response to the rising cases of teenage pregnancies, drug and substance abuse, poor academic performance, violence, high school dropout rate and HIV/AIDS prevalence among secondary school learners in South Africa, Shumani Precious Mulaudzi's Thesis studied the implementation of existing Life Orientation curriculum in secondary schools of the Limpopo province. Her findings revealed some inconsistencies in the implementation of life orientation curriculum in secondary schools, such as lack of trained life orientation teachers in some schools, with some schools not offering the subject properly, some teachers hesitant to teach the subject in other schools, and some learners not taking the subject serious. To fill these gaps, Shumani Precious Mulaudzi developed strategies to facilitate the implementation of existing Life Orientation curriculum in secondary schools of Limpopo Province, which include giving youth a voice; being youth-led and encouraging guardians to play a more active role in the delivery of the subject. The developed strategies share light with secondary school management on how to mitigate the identified inconsistencies towards achieving Sustainable Development Goal 3 of maintaining health and

wellbeing among adolescents. Shumani's Thesis has a potential to generate 4 research articles, three of which have already been presented at national conferences in 2019.

MURWIRA

TINOTENDA SUCCESS

Title : A Framework to facilitate the integration of HIV/AIDS content into university curricula

Promoter : Prof L.B Khoza

Co-promoters : Prof S.M Maputle

: Dr J.T Mabunda

: Dr M Mpeta

Citation

South Africa continues to struggle with the high prevalence of Human Immune-deficiency Virus and Acquired Immune deficiency Syndrome. Young people of the university going age are the most affected by this disease. The higher education sector, particularly lecturers, are well placed to mitigate this pandemic through teaching and learning. Despite the fact, that a lot has been written on the need to integrate HIV/AIDS content into curricula very few institutions of higher learning are heeding the call mainly due to lack of guidance on how to integrate HIV/AIDS content. The study aimed at developing a framework that facilitate integration of HIV/AIDS content into university curricula. The study employed quantitative methodology and was conducted in two phases. The findings suggest that there is limited integration of HIV/AIDS content into curriculum at UNIVEN. Very few students reported being taught about HIV/AIDS by their lecturers hence some students had knowledge gaps about HIV/AIDS. When HIV/AIDS content was taught it was delivered using traditional classroom based methods. The study results also concluded that the lecturers were not prepared to integrate HIV/AIDS content, they had knowledge gaps regarding HIV/AIDS, and very few were trained therefore majority did not teach the subject. The study concluded that lecturers need to be supported to integrate HIV/AIDS content into the curriculum. In response to these findings a framework to facilitate integration of HIV/AIDS content into undergraduate curriculum was proposed.

OLANIYI

FOLUKE COMFORT

Title: : Development of Intervention Strategies for Management of Medical Waste in Vhembe District, South Africa

Promoter : Emeritus Professor Jason S. Ogola

Co-promoter : Dr. Takalani G. Tshitangano

Citation

Dr. Olaniyi Foluke Comfort's study focused on medical waste management in Vhembe District. The candidate noted that in Vhembe District, a systematic study of medical waste from the point of generation to treatment and/or disposal is missing. This prompted her to investigate the current practices of medical waste to develop intervention strategies for effective and sustainable medical waste management in the District. She adopted a convergent parallel approach of mixed method design to investigate the practices and challenges of medical waste management in Vhembe District. She sampled fifteen healthcare facilities within the four local municipalities of the District for the study and interacted with the Limpopo Provincial Department of Health and the waste management company responsible for the treatment and

disposal of medical waste in the Province. She conducted in-depth interviews with the administrative heads and personnel directly involved in medical waste management at the healthcare facilities as well as the representatives from the Department of Health and waste management company. Semi-structured questionnaires were adopted to collect data from 229 medical waste generators and handlers at the healthcare facilities.

The study revealed inefficient practices of medical waste management in the investigated healthcare facilities. Segregation practices were poor, temporary storage and onsite transportation were not done per the recommendations in the guidelines and incineration was the main means of treatment of the waste, the final product being disposed into a hazardous waste landfill. Exposure to training and the level of knowledge about medical waste management was found to be significantly associated with the type of occupation. Also, the use of personal protective equipment was found to be significantly associated with training. The study identified several challenges in medical waste management, including: lack of adequate funding and budget for medical waste management, ineffective and irregular training of healthcare workers, poor attitude of healthcare workers to training, non-compliance to medical waste management guidelines, sub-standard central storage rooms, insufficient personal protective equipment and unavailability of Hepatitis B vaccine. The candidate then developed intervention strategies for improved medical waste management in Vhembe District, using the Strength, Weakness, Opportunity and Threat (SWOT) analysis technique and guided by the Medical Research Council (MRC) Framework for development of complex intervention strategies. The strategies are in line with the Sustainable Development Goal 3 aimed at reducing the number of deaths and illnesses from hazardous chemicals and sharps by 2030 and they were validated by all the relevant stakeholders. Parts of the results have been presented at the International Conference on Solid Waste Technology and Management (ICSW) in Annapolis, USA and Population of Southern Africa (PASA) conference in South Africa. The Thesis has the potential to generate 6 research articles, 2 of which have been published in peer-reviewed journals, 1 is under review and 3 others under preparation.

Title : Enhancing motivational factors in teaching and learning Tshivenda by learners at the intermediary phase.

Promoter : Dr P.E. Matshidze

Co-Promoter : Dr M.R. Raphalalani and

Co-Promoter : Professor V.O. Netshandama

Citation

This research study focused on the ways in which motivation to teach and learn the Tshivenda language could be enhanced with special reference to children at the intermediary phase. There is noticeable lack of interest in children learning the Tshivenda language in schools. As a result, children continue to lose command of their mother tongue language, despite the fact that the call for reviving indigenous languages has been made for several years in South Africa. It remains a struggle to motivate learners to learn Tshivenda. In addition, teaching Tshivenda is perceived as low-level teaching, making Tshivenda teachers both less valued, and less and less interested in teaching the language. Results indicated that Tshivenda language is largely no longer spoken in homes and is hardly encouraged in schools' playgrounds. Parents confirmed that, as a predicament, they often prefer to invest on supporting English proficiency over Tshivenda language learning as they often wish for their children to be successful elsewhere in the country and globally. As a result, children do not have enough time to practice speaking Tshivenda. It was noted that although the government have the policies in place, they are not always followed by actions. This is often noted in the lesser time allocated to media learning outlets and lack of Tshivenda in-service training to increase the capacity of teachers to teach Tshivenda language efficiently. In this regard, retraining and workshops for teachers is recommended. Although there are movements promoting mother-tongue learning, the transformation to desirable levels of excitement to learn and or teach Tshivenda language would take more than just encouraging families and schools to speak Tshivenda language regularly to include levels of activism alongside decolonisation debates and modelling the preference beyond families to community networks and media outlets.

Title : "Changes in the conception of Nationalism in Zimbabwe: A comparative analysis of ZAPU and ZANU Liberation Movements 1977-1990".

Promoter : Dr MC Hlungwani

Co-Promoter : Dr A Mushwana

Citation:

This qualitative study which relied on document analysis, starts by acknowledging how nationalism, from its modern genesis in the ideas of the Italian political philosopher, Niccolò Machiavelli in the 16th century, spread to other parts of the world because of European imperial colonialism. The study then foregrounds the irony that Africans who spearheaded anti-colonial struggles embraced the notion of nationalism as a unifying and liberating force against European colonialism. The case is made through a close examination of the divisive and often tragic modus operandi of Zimbabwe African People's Union (ZAPU) and the Zimbabwe African National Union (ZANU), the two main contending nationalist movements that mobilized people in the then Southern Rhodesia against colonial rule, between 1977 and 1990. While nationalism was used as a positive force of mass mobilization, the study also reveals how the decades-long antagonism between ZAPU and ZANU is instructive and exemplary of the inherent instability in the concept and conceptualization of nationalism. The study brings to bear theories that have exposed the social constructedness of nationalism and how this is

explained by its fierce contestedness in the recent history by Zimbabwe's main nationalist movements. The study concludes by observing that the reality of nationalism lies in that it is socially constructed and can therefore be mobilized for better or for worse depending on the interests of individuals or organizations. Corollary to this conclusion is that nationalism's existence in a perpetual state of constructed transition, is both a cause and function of its continual contestation.

Title : Lucwaningo Lolujulile Lwetinganekwane TeSiswati (A Critical Analysis of Siswati Folk Narratives)

Promoter : Dr JJ Thwala

Co-Promoter : Dr KJ Nkuna

Co-Promoter : Dr P.E.A Ramaite-Mafadza

Citation:

Lucwaningo lolujulile lwetinganekwane teSiswati letibukwe ngekwetinhlobo tato: tinsumo, tinganeko, tinganekwanemilingo, tinganekwanemazimu, ematekelomlandvo nematekelosimanje. Kugcilwe kakhulu etinhlosweni telucwaningo letitsintsa kucambeka, kuhleleka, kusebenta nekwakheka kwato. Kuphawuliwe ngemibono yabosotemdzabu labafana nabo Olrik lowatiwa kakhulu ngemitsetfo letigabatintsafu: wekuvula, welikhatsi newekuphetsa. Kutsintfwe neligalelo laPropp lelitsintsa imisebenti nelulandzelwano. Luhlatiyo lujule kakhulu ekubukeni imigomo lelandzelako etinganekwaneni letehlukene: sihloko, singeniso, balingisi, inkhulumiswano, ludvweshu lwangekhatsi nelwangephandle, sibekandzaba, luvutfondzaba nelupholavutfondzaba. Lapha kuchazeka ngalokuphelele kutsi iyini inganekwane futsi ibaluleke ngani emmangweni. Lolucwaningo lwesekelwe tinhlelolwati tesakhiwombhalo netemisebenti.

This is an extensive analysis of Siswati folktales, which concentrated on the following types: fables, myth, etymological tales, magic tales, cannibal, tales, legends and contemporary tales. The objectives of the study highlights the origin, classification, function and the structure of the folktales. The threefold opinion of the folklorist, Olrik of law of opening, law of the middle and law of the end are encapsulated. The functions and sequences of the folklorist, Propp are well tabulated. The analysis is based on the following techniques: topic, introduction, characters, dialogue, internal and external conflicts, milieu, climax and anti-climax. It is explicitly highlighted what is a folklore and its significance to the society. The research work is supported by structuralism and functionalism theories.

Title

: Lucwaningo Lolujulile Ngetaga Elulwimini LweSiswati (A Critical Analysis of Siswati Proverbs)

Promoter

: Dr K.J Nkuna

Co- Promoter

: Dr J.J Thwala

Co-Promoter

: Dr P.E.A Ramaite-Mafadza

Citation

Lucwaningo lolujulile loluhlatiye taga teSiswati kwabukwa luhlelo netemibhalo njengetisekelo telulwimi. Kuhlatiywe taga njengemisho lephelele levela igcame uma siyibuka ngaphansi kwetinhlobo temisho letilandzelako: locondzile, lombaca nalomagalagala. Kuhlatiywe linanimagama lelakhe leso naleso saga; tifo tenkhulumo letehlukene letisetjentiswako ekwakheni taga: sobito, silandziso, sikhanyiso nesichasiso; tinongo tenkhulumo letilandzelako: sifaniso, sifanisongco, sihabiso, naletinye letitsintsa umcondvolula nemcondvonjula. Kuhloliswe tingcikitsi letehlukene letibukwe kwangcanyiswa buntfu nenswelabuntfu, buhlobo nebutsa, kwetsembeka nekungatsembeki nebuchawe nebugwala. Kujula kwelulwimi kuvetwe ngemakhono ebunkondlo etageni lagcanyiswa lukhetfomagama, secamagama nesigci lesilandzelelekako. Lucwaningo lolusekelwe kakhulu luhlatiyombhalo, tingcikitsi netendzabuko; konkhe lokubukwe ngaphansi kwetinhlelolwati temisebenti netetimpawu.

This is an in-depth study on Siswati proverbs that looked at the grammatical and literary approaches as fundamental perspectives to the language. Proverbs are analyzed as complete sentences that are simple, compound and complex. The number of words that form each proverb are counted and analyzed. The following parts of speech: substantives, predicates, descriptives and qualificatives are classified and structurally analyzed. The figures of speech such as simile, metaphor, hyperbole and their wide ranges depict denotative and connotative meanings that are explicated in relation to the selected proverbs. The thematic domain is looked at according to the binary classification of humanness and inhumanness, friendship and enmity, honesty and dishonesty as well as bravery and cowardice. The richness of the language is displayed by the poetic techniques that are applied in proverbs, which are diction, ellipsis and rhythmic effects. This research work is supported by textual, thematic and etymological analyses, within the functionalism and semiotic theories.

FAITH MARY

Title : The Influence of Traditional Healing Practices on Anti-retroviral Treatment Adherence in Vhembe District, South Africa

Promoter : Dr R Tshifhumulo (UNIVEN)

Co-Promoter : Dr P.E Matshidze (UNIVEN)

Co-Promoter : Prof J Braithwaite (UVA)

Co-Promoter : Dr J Richardson (UVA)

Citation:

This study is anchored at addressing the influence of traditional healing practices on ART adherence. Enhanced access and take-up of ARVs in South Africa has empowered HIV positive people to live longer and healthy lives. However, despite PLWHA knowing the danger linked to poor adherence it is prevalent. Therefore, it was imperative to explore how THPs evaluate and manage sickness in PLWHA and how such practices counterpart or deter the broader scale rollout of ART. A qualitative approach that used an explorative design was used to carry out the study and this resulted in formulation of an ART model that support adherence. The study discovered that after individuals are diagnosed with HIV/AIDS, much emphasis is given on counselling the patients to accept the positive status and to help them cope with post-traumatic stress from HIV/AIDS diagnosis. In the short term, it helps patients to accept the HIV/AIDS positive status but in the long run, there is lack of support on ART adherence. Consequently, PLWHA stops adhering to ART and make use of traditional medicine. It is on this backdrop that study findings prompted devising of a 5 phase PLWHA support program aimed at improving adherence. The support programme is made up of five phases which include the following; empowerment phase, treatment commencement phase, integration phase, upkeep phase and community outreach phase. This study contributes to the body of ART adherence knowledge by addressing the scantiness within academic literature pertaining ART adherence hence the formulated model and program further provides all stakeholders that deal with ART adherence with a model and program for intervention. The research has resulted in the 9th S.A AIDS conference presentation and 2 journal papers submitted for possible publication.

Title : The Phenomenon of Suicide Attempt by Young Female Suicide Survivors at Selected Hospital in Thulamela Municipality, Vhembe District, Limpopo Province

Promoter : Dr N.R Raselekoane

Co-Promoter : Dr T.J Mudau

Citation

The thesis of Ms Fulufhelo Nekhubvi focused on the phenomenon of suicide attempt by young female survivors at a selected hospital in Thulamela Municipality. This study has helped to close the knowledge gap created by the skewed focus on completed suicide often committed by men. Too much focus on completed suicide has sidelined the issue of suicide attempt, which is often committed by women, thereby downplaying the significance of the role of gender in suicide studies which is the central focus of this study. As a result, this study has mainstreamed the role of gender in suicide studies by focusing on suicide attempts often committed by women. The findings of

this study highlighted that suicide attempt by young females was due to relationship problems, poor communication in their intimate relationship, extra marital affairs, chronic medical conditions and mental illnesses. Suicide attempt also affects female survivors medically and psychologically due to the stigma attached to their suicidal behaviour. From this study, Ms Fulufhelo Nekhubvi has developed the suicide intervention strategy called ERAPS. She has also designed a suicide screening tool that can help in detecting, preventing and curbing suicidal behaviour.

This study deals with the medicinal use of plants and also highlights the significant contribution that their nomenclature has made in the development of Siswati. It is ground-breaking in that it sheds light on the application of African wisdom to the healing of diseases. The image of traditional healing practice compares favourably with the surgeries of medical practitioners. This study is invaluable in that it can be used as a primary healthcare manual in healing of common diseases. The researcher reiterates the fact that many of the plants to be found around homes are also suitable for medical purposes. The study also shows how the Siswati language is enriched by the descriptive names given to the plants as well as by the general terminology used by traditional healers. The study shows promise in being of benefit to the recently formed partnerships between traditional healers and medical practitioners and its enrichment of Siswati should also increase the corpus of this field of study significantly. The primary knowledge is acquired from various respondents through the interviews and secondary knowledge through the reading of books. This study is supported by functionalism and cultural materialism theories.

Title : Zimbabwean Short Stories in English: An Exploration of Post-2000 Narratives

Promoter : Dr I. Ndlovu

Co-Promoter : Prof. O. Abodunrin

Citation

This study explored selected post-2000 Zimbabwean short stories in English dealing with what has been called the Zimbabwean crisis. The study notes that from the year 2000, there has been an upsurge in the publication of short stories in Zimbabwe suggesting a causal relationship between the unfortunate material conditions of the country with this notable artistic and cultural phenomenon. Therefore, the study critically examined this short fiction through the Bakhtin's materialist literary theory of the chronotope which shows that fictional texts are organized through a value-laden space-time paradigm and that there is an inherent spatio-temporal relationship between a text and its socio-historical context. The study argues that the short stories' accessibility in terms length and style to both the writer and the reader, allows the genre almost immediate and real time political and social engagement with the Zimbabwean material conditions of crisis in a manner that foregrounds empathy for the suffering masses through a freedom oriented artistic literary vision. The study concludes that the analysed stories do not just represent, comment and reflect the on-going crisis but also refract it in ways that compel the reader to reimagine what had appeared as simply painful perceptual issues beyond philosophical literary meditation. In this regard, the selected stories become non-idealistic artistic renditions of the crisis which seek to positively influence the political and economic trajectories of the country through enabling literary mediated visions.

Title : The Moderating Effect of Information Security on the Adoption of Mobile Marketing Transactions Among South African Tertiary

Promoter : Prof A. Kadyamatimba
Co-Promoter : Prof R. Shambare

Citation:

Regardless of the apparent opportunities which are generated by mobile commerce (m-Commerce), complexities in technology and security issues associated with the implementation of mobile marketing transactions have implied that its adoption within the South African marketplace has been relatively slow. It therefore goes without saying that, for retailers to survive in this highly volatile market, their managers should have in-depth understanding of two m-Commerce dynamics: (1) consumers' decision-making processes, and (2) Internet safety and security issues. In other words, retailers need to understand how consumers take into consideration Internet security when making decisions to use m-Commerce transactions. Consequently, in furthering this discourse, the study considered testing a proposed model on the predictive power of marketing-related mobile activity to help improve understanding and prognosis of the adoption of mobile marketing transactions in South Africa. Specifically, in order to render these tests robust, perceived information security was applied as a moderator variable to increase the explanatory power of the model.

The objectives set out for this research were measured utilising a single cross-sectional approach, guided by the positivist paradigm. In keeping with the dictates of ensuring the highest levels of reliability and validity, a measuring instrument developed from past studies was used. Using a self-administered questionnaire, data were collected from a sample of 810 students from selected South African universities. Descriptive and multivariate statistical tests including the moderated hierarchical regression analysis were used to analyse data. On the whole, the results from the study indicate that marketing-related mobile activity plays an imperative role in stimulating consumers' participation in mobile marketing transactions. Furthermore, the study revealed that South African consumers place greater emphasis on the security of their personal information when making online mobile marketing transactions. As such, both marketing-related mobile activity and perceived information security are considered important antecedent predictors of consumer choice behaviour and adoption patterns for mobile marketing innovations.

Overall, this research provides scholars with a new conceptual framework that enhances robust scientific enquiry into the dynamic purchasing behaviour of contemporary online consumers. Furthermore, the study provides both marketers and policymakers with a set of controllable variables that may be manipulated to promote the adoption of mobile marketing transactions.

The research has resulted in the publication of **2** journal articles and **1** book chapter.

perspective is limiting and inadequate to deal with this problem of high entrepreneurship venture attrition. Such limited perspective focusses narrowly on the business component, excluding the entrepreneurial component. In addition, this perspective does not attempt to explore or address the possible gap between entrepreneurs' expectations and the realities they face in managing businesses.

This study and a limited number of other studies have shown many emerging entrepreneurs to experience a discrepancy between what they expect when running a business, and the often-harsh realities they experience when owning and managing a 'real' business. For researchers as well as for early-stage entrepreneurs, this presents a discrepancy between theory and experiential reality – one of the significant trials of operating a business is when the entrepreneur should deal with this discrepancy. This study referred to this discrepancy as to the Entrepreneurship Gap (EG). The EG is higher when business management and sustainability realities differ greatly from entrepreneurial expectations. Thus, one can postulate when the EG level is high, the entrepreneur is inadequately prepared for establishing, managing and sustaining a business. At the point where this EG becomes apparent, the level of the entrepreneur's ability or inability to deal with business becomes fundamental as well as crucial to identify and or predict his/her success.

The purpose of this study was to develop a framework model that can be used to diagnose business preparedness among early-stage entrepreneurs and therefore assist them to adjust to a career in entrepreneurship. Evidence supporting the framework model and its applications were discussed within the ambit of early-stage businesses. To attain this purpose, an exploratory sequential research design was employed. A two-phase data collection procedure was conducted in the Limpopo Province. Phase one involved in-depth interviews that were to explore the various business factors that entrepreneurs struggle within the early stages of establishing and managing a business. ATLAS.ti version 8 was employed for qualitative data analysis. In phase two, a structured self-administered questionnaire was used. SPSS v24 was used as tools for quantitative analysis. The sample sizes for each phase were five and 215, respectively. The participants were purposively selected after satisfying the selection criteria. This was completed using an explorative data analysis grounded in discrete choice models, and R version 3.6.0 was used in the analysis of the developed models. The various specific business factors affecting entrepreneurs in the early stage of business and which emerged from the data were presented.

The study further developed an EG measurement scale and an Entrepreneurship Gaps Framework (EGF) model. Findings from the EGF model revealed the potential ability of the model to act as a comprehensive diagnostic mechanism that assists early-stage entrepreneurship survival. From the findings, this study argues and advocates the use of the EGF model as a decision-making tool by – but not limited to – policymakers, lenders, and capacity-development institutions, to determine the level of financial and non-financial support that should be provided to entrepreneurs to improve their chances of success. Thus, entrepreneurs are likely to benefit from the EG measurement scale if they make use of it as a self-diagnostic tool to measure and monitor their business preparedness and lived experience of managing and sustaining a business.

The study has resulted in the publication of **1** peer-reviewed conference paper, **1** book chapter and **2** journal papers.

Keywords: *entrepreneurship, entrepreneurship expectations, entrepreneurship gap, entrepreneurship gap framework, entrepreneurship realities, micro perspective.*

microfranchising practices and the efficacy of microfranchising in stimulating entrepreneurial development at the BoP in South Africa.

The research has resulted in the publication of 2 peer reviewed conference abstracts and 1 journal paper.

Title : Documentation and nutritional evaluation of some wild edible fruit plants and traditional vegetables of the Vhembe District Municipality, Limpopo Province, South Africa

Promoter : Prof MP Tshisikhawe (UNIVEN)
Co-Promoter : Dr LF Mushaphi (UNIVEN)

Citation

The aim of the study was to document wild edible plants and evaluate their nutritional status. A total of 160 community members from four local municipalities of Vhembe district participated in data collection through semi-structured interviews. The first aspect was to assess knowledge transfer from elderly to youth members of Vhembe communities. This investigation demonstrated the major indigenous debility among the youth members who live in semi-urban villages. Documentation of additional use categories of fruits and vegetable species revealed *Sclerocayra birrea* (mufula) as the species with most use category frequencies as compared to other edible fruit plant species. Leaves of fruit species were most preferred part in other use categories of wild edible fruit species. Investigation on traditional preservation techniques showed that species were either collected and sun dried or collected, cooked and then sun dried. The study also analyzed the micronutrients of the most preferred vegetables. Leaves of *Amaranthus thunbergii* (mukango) and *Amaranthus hybridus* (vowa) had outstanding Vitamin C concentrations of 69.106 mg/100g DW and 43.299 mg/100g DW respectively. Leaves of *Solanum retroflexum* (muxe) contained high level of β -carotene average at 10.905 mg/100g DW. The study recommends an urgent need for documentation and promotion of nutritious wild edible plants as a way of preserving indigenous knowledge. Three articles were published while three more articles are

under review in different accredited peer-reviewed journals. The study also led to the development of a website www.vendateplants.co.za showing documented Venda traditional edible vegetables.

Title

: Elucidation of the role of linker motifs of *Plasmodium falciparum* Hsp70-1 and Hsp70-z

Promotor

: Prof A Shonhai (UNIVEN)

Co-Promotor

: Dr T Zinanga (Stellenbosch)

Citation

Malaria remains a major killer disease in Africa. Its main victims are young children (< 5 years old) and pregnant mothers. *Plasmodium falciparum*, a protozoa that accounts for most malaria deaths survives in the human red blood cell at the clinical stages of malaria. Amongst its survival strategies in the human host system, *P. falciparum* expresses several heat shock proteins. Heat shock proteins (Hsps) are induced by stress and antimalarial drug pressure. Their main role is to enable other proteins to fold and function. Thus, heat shock proteins are implicated in antimalarial drug resistance. *P. falciparum* Hsp70-z (PfHsp70-z) and PfHsp70-1 occur in the parasite cytosol and both are essential. Both PfHsp70-z and PfHsp70-1 are endowed with linker segments that connect their ATPase and substrate binding domains. The linker serves as a hinge which allows the two domains of the proteins to interact during function. During the study it was observed that one of the two proteins, PfHsp70-z harbours a novel linker motif. In order to understand the importance of the linker motif of the protein, the linker of PfHsp70-z was switched with that of two other proteins: PfHsp70-1 and *E. coli* Hsp70. *In silico* and biophysical studies were conducted which showed that switching the linker motifs of these proteins modulated the conformations of the proteins. The effect of these changes on the functions of the proteins was investigated and the findings established that the novel linker of PfHsp70-z was distinct from the linkers of PfHsp70-1 and *E. coli* Hsp70. It was further established that the linker is important for the protein's stability against both chemical and heat stress. In addition, results also showed that the linker was important for substrate binding, protein-protein interactions as well as for the enzymatic functions of the protein. The findings of the study suggest that the linker of PfHsp70-1 is flexible while that of PfHsp70-z is rigid. This distinction accounts for the functional specialization of the two proteins. The study findings did not only establish the role of the linker motif of PfHsp70-z but paved the way for the possible development of novel antimalarial agents targeting the essential role of this protein.

MICROBIOLOGY

Title

: Modeling diarrheagenic *E. coli* infections and co-infections: Specific roles of diet and pathogen

Promoter

: Prof N Potgieter (UNIVEN)

Co-Promoter

: Prof AN Traore (UNIVEN)
Prof RL Guerrant (UVA, USA)

Citation

In this study, a novel enteropathogenic *E. coli* (EPEC) infectious murine model highlighting growth impairment, diarrhea, increased inflammatory responses and metabolic perturbations *in vivo*, as observed in children presenting with diarrhea in developing countries, was developed. In addition, the diarrheagenic *E. coli* pathotype

co-infections, using *in vitro* and *in vivo* analyses, were further investigated. Interaction between these co-infections highlighted changes in virulence gene expression, systemic inflammation and disease outcome. This is the first study to report diarrhea and growth decrement as a result of EPEC infection *in vivo*. The developed models can further be used to explore therapeutic interventions and facilitate vaccine development. This work has been presented in international conferences and a manuscript has been submitted for publication.

Title : Prevalence of Human Bocavirus in children with acute gastroenteritis in Limpopo Province, South Africa

Promoter : Prof N Potgieter (UNIVEN)

Co-Promoters: Prof AN Traore (UNIVEN)
Dr JP Kabue (UNIVEN)

Citation

The results of the study highlighted the prevalence and genetic diversity of Human Bocavirus (HBoV) strains circulating in a rural area with little or no water and sanitation infrastructure. A detailed literature review which was published from this study indicated that this is the first study in South Africa to show circulating HBoV genotypes in rural communities. Molecular and sequence analyses showed that the HBoV strains identified are related to global strains isolated from clinical samples (children suffering from acute gastrointestinal disease and respiratory diseases) and environmental strains. Two articles have been published, while two other submissions are under consideration, in accredited peer-reviewed journals.

Title : Metal oxide nanostructures and hybrid perovskite semiconductor for photovoltaic application

Promoter : Dr JK Kirui (UNIVEN)

Co-Promoter : Dr L Jhamba (UNIVEN)
Prof D Wamwangi (WITS)
Dr K Roro (CSIR, Pretoria)

Citation

Perovskite-based solar cell (PSC) is the fastest growing solar technology to date since inception in 2009. The current global energy crisis makes it very attractive to do research in materials for energy harvesting. As of late, hybrid perovskite materials have shown incredible possibilities for solar energy conversion and optoelectronics technologies by virtue of its benefits of high conversion efficiency, low-cost preparation and the application of earth-abundant materials, which are basic determinants for massive production. This study investigated the impact of antisolvent and additive on the photophysical properties and probed a better understanding of optical response of the perovskite materials. Dimethyl sulfoxide (DMSO) was used as an additive in dimethylformamide (DMF) to regulate the crystal growth by dissolving the residue of PbI₂ which can impede the crystallization and ethyl acetate as an anti-solvent to control the morphology of the perovskite film. In addition, an investigation was also made into the photophysics of halide perovskites from materials to device. In particular the aim was to study the charge transport mechanism and recombination phenomena in dopant-free hole transport material (HTM) perovskite solar cell using I-V and

electrochemical impedance spectroscopy(EIS) measurements with a focus on physical processes within the perovskite material as an active layer and the parameters that determine the photovoltaic performance. The findings of the study have been presented at both international and national conferences and two papers were published in accredited journals while two others are under review.

Title : Distribution, population status and conservation of the Samango monkey (*Cercopithecus albogularis schwarzi*) in the Limpopo Province, South Africa

Promoter : Prof PJ Taylor (UNIVEN)

Co-Promoter : Prof SH Foord (UNIVEN)
Dr Desire Dalton (SANBI/Pretoria Zoo)

Citation

The study employed a range of ambitious and innovative, field-based as well as laboratory-based, approaches to understanding the distribution, genetic relationships and conservation status and threats of the threatened Samango monkey subspecies from the Soutpansberg Mountains. From field surveys across the breadth of the Soutpansberg, to actively engaging with landowners and other stakeholders, to designing and testing canopy bridge designs to mitigate against roadkills of Samango monkeys, to collecting and analysing samples for genetic analysis (using both DNA sequencing and microsatellite markers), and spatial modelling of dispersal patterns, these valuable new data allowed the adoption of a highly integrated approach to both testing important evolutionary hypotheses about primate speciation as well as making nuanced recommendations about the conservation management of this threatened Samango subspecies. An important conclusion of the study was the finding that eastern and western landscapes of the mountain range requiring different adaptive strategies from the Samango monkeys and different conservation approaches from practitioners. The degree of genetic isolation between different populations raised concerns about the long-term viability of populations in the study area. From the study, two articles have been published and one submission is in press.

Title : Modelling flow and water temperature in the Luvuvhu catchment and their impact on macroinvertebrate assemblages

Promoter : Prof SH Foord (UNIVEN)

Co-Promoter : Dr N Rivers-Moore (UKZN)

Citation

The Vhembe region is mainly arid, and water is a limiting resource. Increased human consumptions coupled with predicted increase in aridity and temperature in the region could have serious implications for aquatic ecosystem. This study modelled changes in flow in the catchment over a period of 70 years. The response of two dominant aquatic invertebrates in the system, namely mayflies [the most diverse insect order in this river system] and blackflies [a dipteran family that has the potential to become a pest species] has been quantified. Flow in the Luvuvhu has seen a significant decrease over the period assessed, particularly during the summer period with predicted flow cessation by 2030. This decrease was not related to a decrease in rainfall, which has remained stable for the last 30 years. Flow has also become more

variable. Mayfly communities had a threshold response to temperature at 19%, while the most important driver of blackfly assemblages was flow. The challenges in implementing an environmental flow regime for the Luvuvhu catchment was also identified. Two articles have been published in accredited journals.
